    public static void main(String[] args) {

        String city = "pune";

        switch(city)
        {
            case "Pune": System.out.println("From Pune");
            break;
            case "Mumbai": System.out.println("From
Mumbai");
            break;
            case "Delhi": System.out.println("From
Delhi");
            break;
            case "Hyderbad": System.out.println("From
Hyderbad");
```

```java
                break;
            default : System.out.println("Not from above
cities");
        }
    }
}
```

```java
package loopStatements;

public class Example1 {

    public static void main(String[] args) {

        System.out.println(1);
        System.out.println(2);
        System.out.println(3);
        System.out.println(4);
        System.out.println(5);
        System.out.println(6);
        System.out.println(7);
        System.out.println(8);
        System.out.println(9);
        System.out.println(10);

        int a = 1;
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
        System.out.println(a++);
    }
}
```

```java
package loopStatements;

public class Example2 {

    public static void main(String[] args) {

        int num = 10;
```

```java
        for(int i = 1;i<=10; i++)
        {
            System.out.println(num*i);
        }
    }
}
```

```java
package loopStatements;

public class Example3 {

    public static void main(String[] args) {

        // 10 to 1

        for(int i = 10;i>=1; i--)
        {
            System.out.println(i);
        }
    }
}
```
